Vol. XXXIV *Thursday, February 25, 1943* *No. 7*

WILL HENRY FOR PRESIDENT ENGINEERING SOCIETY

Gentlemen, the tide will be running its highest on Thursday, February the 25th, 1943.

You men of School, your fame and fortune depend on yourselves, on your diligence, your sincere cordiality, your endless wit and cunning, your willingness to fight for what you know to be right and the fact that you will stop fighting only when you have been conclusively proven wrong—otherwise we fail.

To School the members of the Engineering Society Executive are the leaders whose prime function is to carry out the wishes of the undergraduates. The President of the Engineering Society must command the respect of his followers and keep all the diverse activities of the society under his personal surveillance. To accomplish these things with the maximum amount of success this man must have not only a sincere interest in all phases of college life—namely, scholastics, athletics and social functions but also he must have the necessary zeal and energy to perform this task. He must be willing to budget his time, to work conscientiously and not to be dismayed so that he may do this coveted position justice.

Gentlemen, I feel confident that this man will command the respect of his followers and that he has the energy and the necessary faith in his own convictions to carry out this job.

In his first, second and third years, respectively, he has not only taken an active part in all School functions most particularly the Rugby team and the Varsity B.W. and F. Squad, but also has been the first year representative, the Vice-President and Secretary-Treasurer of the Athletic Association. During this time he has represented School on the Intramural Sports Committee, been organizer and co-organizer of banquets and social functions and necessarily gained the experience for a good executive.

(*Cont'd on page 2*)

WANTED AT ONCE

By nationally known organization executive with initiative, leadership and organization ability. Permanent position to right man. Must have good general education and at least three years engineering training. Experienced in handling men and willing to accept responsibility. Previous experience, personality and background important. Reply in writing to any Ballot Box, Engineering Building, Toronto.

Such would be the advertisement if the Engineering Society were to use this means to obtain a man for President.

But there is no need to look further since J. D. ABELL, candidate for President, fills all these requirements.

Before coming to "School", ABELL worked for three years in a commercial house. This business experience has proved a valuable asset to your Society in the past and will prove even more so in the future.

In his second year ABELL as Vice-President of the Class of 4T4, among other things produced and directed the FRESHMAN RECEPTION. This event was acclaimed by all as the most outstanding entertainment of its kind and has given subsequent executives something to aim at.

This year not only was ABELL Vice-Chairman of the Student Branch of the American Society of Mechanical Engineers, but also held the position of 2nd Vice-President of the Engineering Society. In this latter position he is responsible for the purchase and merchandising of over $2,200 worth of your supplies. To sell these goods at such low prices under the present conditions of scarcity and soaring prices is no mean accomplishment. This is only one of the instances in which ABELL'S business background has proven its worth to you. This position also has

(*Cont'd on page 2*)

REASONS FOR SUGGESTING JACK WARD FOR PRESIDENT ENGINEERING SOCIETY

If you, the voter, were asked to name the one main qualification that the President of the Engineering Society should have, wouldn't your answer be "Experience"? And you would be one hundred per cent right. But then, what would you include in that word "experience"?

You would be sure to say that the man should know all the different branches of the Engineering Society, wouldn't you? Also, that he should know the duties of those different branches, their functions, and their scope. Add to the above, that he should know what work each officer in the different branches is expected to do, and up to now you would be fifty per cent correct. But is that all you would include in "experience"?

No, for you would be sure to say that such a person should have some experience—the more, the better, as an officer in some of these branches of the Engineering Society. With such experience, he would have the knowledge of organization as one of his requisites. Moreover, he would know what to demand of each of the branches, and of their officers in the way of work. With his experience as an officer in the offices of the various branches of the Engineering Society, he would know how best to handle the office of the President of the Engineering Society so as to have the Society run most smoothly, and how to get the most co-operation amongst all the branches.

If all the above points should be included in your answer to the question, "what should the word 'experience' include," then give yourself one hundred per cent for being absolutely correct.

But what man in School, at the present time, can claim to have such experience? There is only one answer to that. The only man is JACK WARD. Jack's experience is as follows:—

EDITORIAL

"Vote as you like, but vote". These words always appear at the time of a general election and rightly so, for at School, where the success of the forthcoming year depends upon a good executive, it is the duty of every Schoolman to exercise this right.

This is only one of the duties of a Schoolman. Another is, in deciding how he should vote. For the past few days you have had men asking you to vote for them, leaving you some memorandum and requesting you to advertise their candidature. This is all well and good and is to be expected, but it is also to be expected that you will decide in your own mind just who you think is the right man for the job. Remember you have a mind of your own, don't let the crowd decide for you, but think it over and decide for yourself. We cannot stress this point too much, if you do not know any of the candidates running for an office, inquire around and see what type of men they are, what experience they have had and then decide for yourself.

We bring the following points to your attention, know the man or at least the type of man, know the position for which the man is trying, be careful of campaign performances.

The above has been written in the interests of the voters and the candidates, for we are as anxious as you that the proper men are elected and in this way to assure you of a real good year next year. In conclusion, we repeat, "vote as you like, but vote".

PROGRAMME

12.00 noon—Assemble outside north door of School Building. Parade with Pipers to Hart House. Proceed to the Great Hall for special luncheon.

1.00 p.m.—Return to School Building to exercise lungs and franchise.

2.30 p.m.—Polls close.

2.58 p.m.—Curtains rise.

POLLING STATIONS ALL IN ENGINEERING BUILDING

1st year—Top Floor.
2nd year—Second Floor.
3rd year—Main Floor, Machine Design Lab.
4th year—Main Floor, Main Hall.
Polls open from 1.00 to 2.30 p.m.

afforded him an excellent opportunity of studying the duties and responsibilities of the President. His active participation in the planning of "School" functions has given him a thorough understanding of the workings of your Society.

We feel that ABELL has the leadership and organization ability which, along with his invaluable business training, will fit him beyond a doubt for the office of President of your Society. It is important in these times of war that you have as your President a man with mature and sound ideas. You may be assured that your interests will be his interests.

In the school year of 1940-41, he was:
Secretary-Treasurer of 4T4
In the school year of 1941-42, he was:
President of 4T4
Chairman of the Noel Barr Injury Fund
In the school year of 1942-43, he was:
Re-elected President of 4T4
Chairman of the School Nite Committee
Member of the School Dinner Committee
Member of the School At-Home Committee

This is the experience that Jack has had up to now. NO OTHER CANDIDATE for the office of President of the Engineering Society can EQUAL IT.

Remember what he has said of our duty and of the qualifications necessary for the Engineering Society President and remember the experience this man has gained and cast your vote for him feeling justly that your choice is right for the good and interests of School.

Little Red Schoolmates:

As the war has progressed from year to year and the status of the University Student has turned more and more to one of question, it has become increasingly difficult for the Society and Year Executives to look after extra-curricular School activities, which in the eyes of the public are things to be looked askance at.

It is true that, as people in preferential positions, we must always be viewed with suspicion, but as long as we do our work down here at the Little Red in a manner satisfactory to the government (which after all DOES represent that same public), we are entitled to a certain amount of recreation. It is therefore important that the affairs of the Engineering Society, which are largely devoted to that end, be managed both competently and completely.

The position of First Vice-President requires experience and a lot of hard work, and the selection of the right man is a matter of true importance. If you vote me in I will really try to do right by Our Nell. DICK MANSELL,
Candidate for First Vice-President of the Engineering Society.

Schoolmen:—

As students in wartime we have seen many changes in our School life. Some of us may regret the passing of those more robust demonstrations of the Schoolmen of the past. Their reminiscences may arouse enevy in us, but as Schoolmen we are capable of facing the facts and realizing the conditions in their true perspective. It will be required of us during this year's elections to keep the School Spirit alive without resorting to any form of public demonstration. It is our responsibility, fellows, to see that School is not let down.

As candidate for the office of 1st Vice-President of the Engineering Society, I offer my time and experience to you as members. In accordance with the policy established by the Engineering Society Executive for 1942-43, I was given the opportunity and privilege of under-studying the duties of this office. The duties of the 1st Vice-President, especially in such times as the present, demand that we have a capable and responsible man in that office. It will be my sincere endeavour to fulfil those demands. ARTHUR GORMAN,
Candidate for 1st Vice-President of the Engineering Society.
